

Decision-ready presentations & reports.

We work with clients throughout the process to turn ideas, evidence and insight into clear presentations, visual reports and decision tools

We help turn unclear or complex material into structured presentations, reports and visual resources.

› Purpose and audience

We define what the communication needs to do, who it is for and what form it should take.

› Message and hierarchy

We identify what matters most and create a clear order of information.

› Structure and flow

We organise the content and plan the sequence of your presentation, report or resource.

› Visual explanation

We create diagrams, charts, maps, timelines, logic models and bespoke graphics that make information easier to understand.

We help organisations understand complex situations, develop clear narratives and create communication that supports decisions.

Complexity compounds when structure comes too late.

Without early structure, complexity compounds.
By the time feedback cycles begin, density is high and clarity is hard to recover.

Our approach

Rather than showing finished client work, we have developed these examples ourselves.

Built around real problems, using the tools and approaches we bring to engagements.

› LINEA example

Explaining a service crisis using charts, diagrams and timelines.

Explaining the system behind the outcome.

LINEA case study

Customer satisfaction had fallen after a major system change, but the story was not explained by one cause.

Workload, training, cognitive load, morale, turnover, and management response were interacting over time.

The causal loop diagram made those relationships visible, helping the audience understand why performance fell, why recovery lagged, and what changed as training took effect.

[View full case study →](#)

Separating decisions, actions, and outcomes.

LINEA example

Some communication problems are structural. The audience does not just need a better-looking slide, they need to understand what happened, in what order and why results took time to appear.

This visual separates leadership decisions, operational actions, and performance indicators. It shows why customer satisfaction continued to fall after action had been approved and why visible improvement only appeared after capability had time to build.

[View full case study →](#)

Helping audiences prioritise.

Digital Access Advisory Group example

This case study explores how a specialist advisory organisation might present its work to different audiences while maintaining clarity.

Some visuals are not just explanatory. They help people make decisions.

Matrices, frameworks, maps, and scoring tools can help teams compare risks, identify priorities, and focus discussion.

This matrix helps separate high-priority structural risks from issues that need monitoring. It turns a list of access concerns into a practical discussion tool for programme design.

[View full case study →](#)

Clarifying impact across a programme lifecycle.

Digital Access Advisory Group example

Complex organisations often struggle to explain where they add value, especially when their work is advisory, enabling, or indirect.

This lifecycle view makes an advisory organisation’s role easier to understand. It shows where the greatest impact happens, how support continues over time, and how access considerations can be integrated throughout a programme.

Turning a complex argument into a visual model.

Threshold example

This example shows how we approach advocacy communication, where the job is not just to inform but to build a case.

Some projects need to move beyond explanation into a proposed model: how a process could work, where value flows, who is involved and what changes.

This visual turns a housing policy argument into a process model. It shows how local partnership, planning consent, value capture, construction and community benefit connect within an alternative development approach.

[View full case study →](#)

An alternative development model

How the model works:

1. Work with local landowners early

Establishes a shared approach before planning, increasing alignment and reducing opposition.

2. Aligns with local authority priorities

Design plans based on local needs. This improves likelihood planning approval and public support.

3. Secures planning permission

Unlocks significant land value uplift through planning consent.

4. Captures value uplift for local benefit

Make sure the added value is shared locally. Keep the value gained in the community.

5. Use local builders and suppliers

Work with local companies during construction. This keeps the value in the local economy.

6. Build homes that people need

Focus on suitable housing types. For example, homes for families and key workers.

7. Create long-term local benefits

Ensure financial and social value stays in the area. Do not focus only on external investors.

8. Reinvests in the local economy

Put value back into local jobs, services, and future projects.

Work locally, share value locally, and keep benefits in the community.

A model for locally led development

We shape the output around what you need to explain.

The work may become a slide deck. It may also become a report, briefing, visual summary, process map, animated resource or digital document / website.

We help determine what needs to be understood, who needs to understand it and which format will support that outcome.

› Presentations & briefings

Board and leadership presentations; policy and research briefings; funder and partner decks.

› Reports & visual summaries

Impact and evaluation reports; data-led reports; visual summaries and explainers.

› Visual tools & models

Process diagrams; logic models; systems maps; decision maps; causal loops.

› Digital resources

Animated or interactive resources.

Examples of how we have helped

A selection of projects where we were brought in early to shape the structure and narrative.

CHARITY / THIRD SECTOR

Board-level transformation plan

Turned a few pages of consultant notes into a structured review and actionable transformation plan for the board of a major UK charity.

ENERGY / TECHNICAL

Technical pitch for a global energy audience

Reshaped a highly technical presentation about legacy seismic data analysis into a clear value story for decision-makers, while retaining enough technical depth for specialists in the room.

LEGAL / PROFESSIONAL SERVICES

Transformation presentation

Helped structure and present a transformation programme for equity partners at a global law firm.

AVIATION / SYSTEMS INTEGRATION

Airport systems upgrade presentation

Created a successful bid presentation for a complex air traffic control systems upgrade at a UK airport.

ENERGY / GOVERNMENT

Sector workforce strategy document

Produced a recurring UK workforce strategy document for a government / energy and utilities audience.

EDUCATION / GOVERNMENT

Assessment data reporting

Designed and maintained a suite of stakeholder reports presenting standardised assessment data for a devolved government education programme.

AUTOMOTIVE ACCOUNTS FOR
OVER HALF OF GROUP REVENUE

AUTOMOTIVE

52%

A platform built for artists

Sell music moments, engage fans, and unlock new income streams.

Key features

- Create Limited Edition Content
- Instant Earnings
- Auto-split Payments
- Engage Superfans
- Support Charities

→ What it is

A toolkit for artists to turn releases, live moments, and creative content into sellable digital products.

→ Who it's for

Independent artists, teams, and labels seeking new revenue and stronger fan relationships.

→ How it works

Artists upload content, create digital drops, and promote through their own channels. Sell anywhere—websites, social bios, QR codes, or direct links.

GoMusic takes a **10%** commission — the rest goes directly to artists and collaborators.

HISTORY

The Faist Group, founded in 1978 in Italy by **Gianfranco Natali**, is a global leader in components and industrial assemblies, growing from an artisan shop into a multinational firm with 32 operational sites focused on manufacturing technology. The company expanded into the automotive sector in 1980 and currently operates across five major business units.

GoMusic is building the platform that makes that change possible.

+ Artists control how they earn.

They choose how their music is packaged, priced, and sold—based on connection, not algorithms.

+ Artists engage on their own terms.

GoMusic reduces pressure to constantly post, giving creators control over how they connect with fans.

+ Artists grow with their communities.

It's not about going viral—it's about growing with the fans who already care.
